The user starts with a blank canvas, usually a simple 2D drawing. The user can easily choose a view from a number of different views, including wireframe, 3D, color, and a textured 3D surface. There are three main views, namely Classic, Newspaper and Plan. More specialized views include Architectural and Engineering. After a view has been chosen, the user can choose tools to work with. Once selected, the tools are available in any view. For example, the user can open the 3D view and then start drawing using the 3D tools. The user can then switch back to the 2D view to check for errors or revisions, or to use other functions of the program. Views AutoCAD Classic Classic is AutoCAD's default view. The view contains a drawing window on the left and a tool pallet on the right. The drawing window provides an easy way to manipulate the model. It can be resized to fill the screen, moved, rotated, and dragged. The user can zoom in and out by holding the Ctrl key while using the scroll wheel on a mouse or by using the slider on a touchpad. The drawing window can also be saved as a PDF file or exported to other file formats. The drawing window can be resized in width and height.

Any change to the model can be undone by pressing Ctrl and the Ctrl+Z key combination. To undo the last change, the user can select Undo from the tool pallet. The tool pallet in Classic consists of twelve categories: Freehand tools Draw tools: Draw, Circle, Ellipse, Arc, Rectangle, Polyline, Polygon and Spline. Dimension tools: Align, Distribute, Mark, Markvert, Measure, Point, Rectangle, Scale, Snap, Trim, Text, and View. Connection tools: Angle, Dimension, Intersect, Linetype, Spline, and Vertex.
