Cracked Dandelion With Keygen is based on Win 7 64 bit and works under Windows 7 32 and Vista 64. It uses the color scheme of Windows 7 and not only it, but also the desktop design of the Windows desktop. And it has a dandelion as its logo. It is a very small theme (about 40 kB in total). Using your mouse, you can configure all the aspects of the theme. Features: Sky color (the wallpaper color) Window color (the entire window color except the active window color) Transparent Windows Corrupted Bevels and Shapes Every Window Resizable Every Window Maximizable You can turn the theme on/off, adjust the window color and set a sky color. Just right-click on the dandelion logo and set the preferences. Also the user interface is customizable. Sky color: The program does not only use sky color (the wallpaper color) as a background for the desktop. Because of the time that is passed, also the active window color is the wallpaper color. This is the best solution of the Windows 7 background problem. One can leave the desktop, but keep the ability to see and use the active Windows in this time. Window color: If you set the window color the same as the wallpaper color, the active window color is also the wallpaper color. So, there is the best solution to the Windows 7 background problem. It is, however, an excellent system, because you can see the inactive windows also in the wallpaper color. As a consequence of this system, the background of your desktop is mostly the sky color and the active window color. You can set the wallpaper color to the sky color, because the windows will look normal. Transparent Windows: If you set the active window color to the sky color, then Windows will have a transparent background. It is now possible to see through to the desktop that is behind. So you have a colorful picture behind the transparent active window color. Every Window Resizable: In order to facilitate desktop customization, each window can be resized. Also the windows can be maximized. In some themes, an active window of the last used application is always maximized. It is not necessary in Dandelion, because it is possible to change the active window size, as well as the window size of the maximized windows. Every Window Maximizable: Using all the available space, the active window will be maximized. With other themes,
