A: This is a known issue, sort of. You can either try removing the repair tool from the settings, reinstalling the software, or you can live with the default settings. The Data Recovery wizard will try to recover the deleted or encrypted data, but it won't work. I have no idea why this happens in the first place. This was a known issue for a long time in the forum, and no one posted a solution for it. Howard Raymond MacTaggart Howard Raymond Mac

How to remove this malware automatically? A:
Open a new browser tab and type in the following address: Enter the following code into the search field (you'll have to copy/paste the code): SWX7PHBB.license-keys-generic.txt
Search again, now you will see several results to choose from. Select the 1st link (or the first link that seems to fit your best), and choose 'download the file'. It will download a file called "license-keys-generic.txt". Extract that to your Desktop. Edit: If you don't have Internet Explorer, you can download the most recent version from these links: For 32-bit version: Internet Explorer 11 for Windows 10 Internet Explorer 11 For 64-bit version: Internet Explorer 11 for Windows 10 Internet Explorer 11 The most current version of

Windows 7 (32/64-bit) does not have access to the URL I mentioned, but there are other workarounds in addition to the one I proposed. Here are the steps: Download the most recent version of the installer for the most current OS (I recommend the "Internet Explorer 11" link). Download an offline installer. Run the offline installer, choose "Custom" mode and point to the downloaded executable. When asked for a CD or DVD, choose "No". Install the offline installer, which will extract the necessary files. Run the offline installer. Note: Make sure the file "license-keys-generic.txt" is extracted to the correct place, or use the run command "c:\Users\{your user ID}>net\direct\{random file name}\license-keys-generic.txt". The file should be a text file (not a binary file) so you need to copy/paste the text from the downloaded file into the command line. Here are other files that might help you: license-keys-generic.csv license-keys-generic-android.json license-keys-generic-windows-8.json

Q: PHP Fatal error: Cannot use object of type stdClass as array I am making this simple file uploader but i am having this error. I am using

fopen() and I can't seem to find why I
