## ReportServer Explorer

ReportServer Explorer Torrent Download is based on the Microsoft.NET framework, and it uses the Microsoft Windows Automation COM interfaces for calling the underlying Microsoft Reporting Services. It communicates directly to the server without using any proxy server. It is similar to the Microsoft ReportViewer or FastReport.  ReportServer Explorer is designed to work with any server that can be used with Microsoft Reporting Services - a supported framework is SQL Server 2000, SQL Server 2005 and SQL Server 2008  Reports and folders are stored on the server, and are extracted on the client when downloading reports.  On the client, a folder selection dialog is used to find items on the server.  Upload / Download option is limited to.RDL files, but supports also standard.rdl reports  Drag and drop reports, folders, datasets and parameters are supported  Analysis Reports are supported, but only via a "File" button in the toolbar  Supports distribution management via ReportSharing.ReportManager  Built-in standard lists to find folders, all report, and reports in a specific folder.  Allows to open (in read-only mode) report's designer (.rdlc) or script (.rpt) ReportServer Explorer Features:  Support for Microsoft Reporting Services  Supports multiple simultaneous downloads  Supports file browsing (determined by XML file format)  Supports download to a specific folder on the server  Supports drag and drop reports  Supports upload of report or dataset (.rdl)  Supports upload of report templates (.rdl), templates (.rdlc) and scripts (.rpt)  Supports data source management (.rdlc)  Supports folder permissions (.rdlc)  Supports datasources (.rdlc)  Supports parameters (.rdlc)  Supports styles (.rdlc)  Allows to browse folders and reports on the server to find items.  Allow to select folders and report and also select files and folders on the client and then move, copy, rename, delete them.  Allows to upload a folder structure to a server.  Supports browsing folder (kind of shortcut)  Supports download and upload of reports stored on the server  Supports renaming of reports, datasources b7e8fd5c8
