## GNU Solfège Crack +

KEYMACRO is a keyboard macro software that can be used to define keyboard macros for fast repeating or long running tasks. KeyMACRO is quite similar to a software called Microsoft AutoHotKey, but with a few advantages that make it more interesting:

- allows macro definitions only for modifiers (options +, -, and \*), not for the whole keyboard
- allows macro definitions only for keys. So you can't define macros for modifier keys or that will be executed in the same moment for all modifier keys.
- KeyMACRO can play the macro on a music file, if it is configured. So you can play a music file and define macros at the same time.
- Macros are executed with same speed as the music.
- macros can be executed in the reverse order.
- Macro definitions can be used with the same keyboard (eg: also with the other hand)
- you can define macro names and keys that must be pressed to execute them (with the same order as it was defined)
- you can define what should be done when the macro is executed. This is useful for things like: stop the playing, skip to the next macro, etc.
- you can combine macro names and keys in one macro definition
- If the file with macros has a BPM value, KeyMACRO will execute the macros at a certain speed. (eg: 60 BPM, 200 BPM)
- KeyMACRO can set up MIDI sequences for you.
- you can configure the macros to be saved on the USB stick and/or to be loaded again from there.
- you can turn off the F1 menu to avoid conflicts.
- and many other features as you can read in the documentation.

----- Installation: 1.- Download the KeyMACRO 2.- Unpack it with the following command: `tar xvzf zz_name_file.tar.gz` 3.- You will get some files inside the `zz_name_file/` directory. 4.- Copy all the files inside the `zz_name_file/macros/` dir. 5.- Run the executable file that is inside the `zz_name_file/exe/` dir. 6.- The executable will start a window, showing the definition of all the macros. 7.- Type the key you want to repeat, and press the space key. 8.- You will see the macro definition code. Type it and press the space key
